CSCE 1040 Computer Science II

Instructor: David Keathly  Semester: Fall 2016
Office: NTDP F202  Lecture TTh 11:30 – 12:20 NTDP B142
Office Hours: MW 10:00 – 12:00 and TTh 10:00 – 11:30

Phone: 940-565-4801
Email: david.keathly@unt.edu (email will get better response than phone)

Course Catalog Description

CSCE 1040, the second course in the introductory sequence, focuses on more advanced C programming, designing and implementing larger software projects, introduction to dynamic data structures, and a beginning exploration of Object Oriented paradigms using C++. The main focus is on developing students’ software development skills.

Course Outcomes

Course outcomes are measurable achievements to be accomplished by the completion of a course. These outcomes are evaluated as part of our ABET accreditation process.

1. Write readable, efficient, and correct C++ programs for all programming constructs defined for Programming Fundamentals I plus dynamic memory allocation, bit manipulation operators, exceptions, classes and inheritance.
2. Design and implement recursive algorithms in C/C++.
3. Use common data structures and techniques such as stacks, queues, linked lists, trees and hashing.
5. Use a symbolic debugger to find and fix runtime and logical errors in C software.
6. Using a software process model, design and implement a significant software application in C++. Significant software in this context means a software application with at least five files, ten functions and a make file.
7. Implement, compile and run C++ programs that includes classes, inheritance, virtual functions, function overloading and overriding, as well as other aspects of Polymorphism.

Textbook:

Walter Savitch, Problem Solving with C++, 9th Edition, Addison-Wesley

Prerequisites
Completion of CSCE 1030 with a grade of C or better.

**Course Requirements:**

Attendance: Highly recommended as student is responsible for all materials covered in lecture and class discussion

Exams: Two

Assignments: There will be some larger programming assignments, quizzes, exams and laboratory exercises to complete

**For More information**

Faculty Webpage: Faculty.unt.edu
Class Web Page: Blackboard Learn

**Course Plan**

My plan this semester is that we will use half the class period for traditional lectures that will also be available in recordings (same topic but slightly different dialog), and the second half as problem solving, homework help, etc. Some lectures may only be recorded and you will have TA and grader help during class time when I am traveling (about 2 weeks out of the Fall session). This means you should be able to begin working on homework early and get most of it done during class time. You can also get additional help during office hours and during lab after you complete the lab assignments.
## Course Calendar (subject to change)

<table>
<thead>
<tr>
<th>Week</th>
<th>Topics</th>
<th>Readings and Materials</th>
</tr>
</thead>
</table>
| Week 1 | Course Overview  
Things you should know  
Pointers (review)  
File I/O, Command Line Args (review) | Chapters 1-9 |
| Week 2 | Structures and Unions (review?)  
Quiz 1  
Lab 0 (optional, but recommended) | Chapter 10 |
| Week 3 | Stacks, Queues, Lists and Trees  
Lab 1 (Structures)  
Quiz 2 | Chapter 13 |
| Week 4 | Recursion  
Bit/Byte Manipulation  
Lab 2 (Pointers)  
Quiz 3 | Chapter 14 |
| Week 5 | Makefiles  
Storage Classes  
Debugging  
Program Organization (Tables Pkg)  
Lab 3 (recursion and hashing)  
Quiz 4 | notes |
| Week 6 | Objects and Classes (OOAD) – a paradigm shift  
Lab 4 (Lists and Bit/Byte Manip)  
Quiz 5 | Chapter 10 |
| Week 7 | C++ What's new?  
C++ I/O beyond cin and cout  
Lab 5 (Debugging)  
Quiz 6 | Chapter 11 |
| Week 8 | Implementing Classes  
Lab 6 (Lab Exam)  
Quiz 7  
Exam 1 (covers material through Week 6) | Chapter 10,11 |
| Week 9 | Design Patterns and Practices  
Data Protection and Friends  
Lab 7 (OO Design)  
Quiz 8 | Notes and Chapter 11 |
| Week 10 | Inheritance and Polymorphism  
Lab 8 (Function Overloading)  
Quiz 9 | Chapter 15 |
<table>
<thead>
<tr>
<th>Week 11</th>
<th>Operator Overloading Templates and STL Lab 9 (C++ I/O) Quiz 10</th>
<th>Chapter 17, 18</th>
</tr>

<tr>
<td>Week 15</td>
<td>Advanced Topics Exam Review</td>
<td></td>
</tr>
<tr>
<td>Week 16</td>
<td>Final Exam (Exam 2)</td>
<td></td>
</tr>
</tbody>
</table>

**Grading Policy**

The various components of your grade are weighted as follows:

- Lab Programs (12 drop 1) 30%
- Quizzes (11 drop 1) 10%
- Larger Programming Assignments (6 – no drops) 40%
- Exams (2, 10% each – no drops) 20%

**Course Policies:**

- On programs, do your own work. Do NOT work with other students on shared program solutions. Do NOT get help with algorithms or coding from anyone other than your instructor or the TAs. Do NOT use even partial program solutions from the Internet. Failure to adhere to these strict standards will be cause for disciplinary action that could be as severe as expulsion from the university.

- It IS permissible to obtain help from whoever you wish to fix syntax errors. We will be discussing in class the different types of errors that occur in programs so there will be ample opportunity for you to learn the difference between syntax and other errors. But remember, for anything but syntax errors, getting programming assistance from any source other than your instructor or the Class TAs will be considered cheating and dealt with harshly.
• You need to do your own work on quizzes and exams as well. Here there should be no ambiguity at all.

• In case the above description, and in-class discussion of my views on appropriate and inappropriate collaboration does not answer all of your questions, please look at the university Student Rights and Responsibilities web page.

• There will be no make-up exams, quizzes, or programs given in this class. However, for documented *excused absences* or *emergencies* additional time for homework or an alternate lab date may be granted. Exam makeups or substitutions may be granted as well depending on the situation. Note these exceptions are only in the case of documented excused absences or emergencies. In most cases you should contact the instructor before the absence to make proper arrangements.

• You are responsible for the information covered in class, whether you attend class or not. Individualized lectures will not be given. Please check with other class members for any notes that might have been missed during an absence. Except for the start of the term, attendance will not be taken in lecture. However, your attendance is strongly recommended to improve your opportunity to meet course objectives.

• Weekly quizzes will be completed online via the class webpage.

• Students should expect an "in-lab" program each week in lab. The program will be submitted before that lab session is complete. You must make arrangements in advance if you are going to miss your assigned lab section. All labs must be completed within the calendar week they are assigned. All work will be completed in lab unless otherwise instructed by your lab TA.

• There is no curve grading in this class. However the instructor does maintain a “fuzzy borders” policy at the end of the semester for students who complete every lab, homework assignment, quiz and exam. This means that grades that are close to a border (e.g. 87.5 – 89.4) might round up to the next higher grade if students have completed all assignments and have maintained good performance on homework and labs, but perhaps fallen a bit on quizzes or exams. Details of this policy will be discussed during the first class period.

• All non-lab programming assignments are due at 11:59pm on the due date. **Programming assignments will be accepted up to 24 hours late and late programming assignments will be assessed a 50% grade reduction penalty. After 24 (exactly!) hours, late programming assignments will receive a grade of zero.** Partial credit will only be given for programs which compile but which are not complete. **No regular or late credit will be given for programs that do not compile!** Starting early on programming projects is strongly encouraged. Students typically have great difficulty completing their projects in one night the day before they are due. Students are allowed to discuss program design and other high level issues with each other. Students are also
allowed to help each other understand specific compiler or run time error messages. Copying all or part of another person's program is strictly prohibited and will result in a grade of zero. Supplying printed or electronic copies of your homework to other classmates will also result in a grade of zero. All programs will be submitted through the class website.

- The instructor, peer mentors and TAs require a current copy of the program when a student is asking a question about a program.

- All pertinent information about the class (assignments, exam reviews, sample code, written topic discussions, and day-to-day event schedule) is available via the class webpage. If there is ever a question as to when something is due, or an additional copy of a course document is needed, ALWAYS check the class webpage. If you feel there is incorrect or there is missing information on the class website, email the instructor about the problem immediately. Electronic mail (email) will be a major means of communication with the instructor outside of actual classroom discussions.

- Please keep this information sheet handy during the semester and always periodically check the class homepage for any course information, including scheduling of programming assignments, exams, and exam reviews.

* Excused Absences: Students are expected to schedule routine appointments and activities so as not to conflict with attending class. However, some absences cannot be prevented. In the event of a medical emergency or family death, students must request an excused absence as quickly as feasible following the emergency. Use common sense. Students must provide documentation that verifies an emergency arose.

* Emergencies: By definition, emergencies cannot be planned for. Your instructor attempts to make accommodations in these instances that allow for making up missed work and completion of the course in a timely manner. Among these emergencies are:

- A death in your immediate family.
- An accident or illness requiring immediate medical treatment and where a doctor has indicated attending class is impossible or inadvisable.
- Employees who are on call 24/7 fall in this category but must document that they were called during a scheduled class.

**Student Evaluation of Teaching Effectiveness**

The Student Evaluation of Teaching Effectiveness is a requirement for all organized classes at UNT. This short survey will be made available to you at the end of the semester, providing you a chance to comment on how this class is taught. I am very interested in the feedback I get from students, as I work to continually improve my teaching. I consider the your evaluations to be an important part of your participation in this class
ADA:

UNT complies with all federal and state laws and regulations regarding discrimination including the Americans with Disability Act of 1990 (ADA). If you have a disability and need a reasonable accommodation for equal access to education or services please contact the Office of Disability Accommodation.
