Course Description
This course has been designed to provide advanced students and professionals with perspectives and commentaries on issues related to the behavioral treatment of autism. The course is not designed to teach students techniques in the behavioral treatment of autism (see other courses in our catalog), but rather to provide a professional context for understanding the history, content, and complexities of behavioral interventions. A majority of the information discussed falls under the scientific discipline of Applied Behavior Analysis (ABA). Students will benefit most from the course if they have training and experience in Applied Behavior Analysis.

The course addresses three main topics: 1) Autism Interventions and Science, 2) Design and Application of Interventions, and 3) Intervention Supports. Within each topic, guest lecturers will speak on some aspect of the topic. Readings will complement, contrast, extend or emphasize the lectures. Student activities include viewing lectures, reading articles and chapters, and answering study questions. Finally, students will integrate each of the main topics into a series of three essays.

Course Prerequisites
BEHV 5130 Basic Behavioral Principles
BEHV 5150 Techniques
BEVH 5170 Research Applications

Instructor Information
Kenda Morrison, Ph.D., BCBA-D is the course designer, moderator and instructor. To learn more about your instructor, please see the Home page in your course. Katrina Hille, MS, BCBA, is the Teaching Assistant. Katrina will answer questions about course content and technology, and provide requested tutoring.

Assistance
If you have a question that is not answered in the syllabus or activity instructions, we are here to help! To contact your Instructor or Teaching Assistant, please select “Inbox” to the left of your course menu. Include your EUID and the activity title in the subject field of your email when you are asking about a specific activity. Students can expect a response before or during the next business day.

If you experience problems with Canvas, please select “help” to the left side of your screen. If you believe Canvas is experiencing an outage, please go here to check.

If you require help registering for this or another course in the sequence, or if you need help with other administrative matters, please contact Brook Wheetley at BEHVDLINFO@unt.edu. She will either help you or forward your request for help to the appropriate personnel at UNT.

Please ensure that you are receiving email from all "@unt.edu" addresses. Check your spam filters and your junk email folders. Change your email settings to allow emails from us to your inbox. We are not responsible for emails we send that you do not receive due to your email account settings. No extensions or exceptions will be granted based on this issue.
## Autism Course Objectives and Learning Competencies

</table>
A Note Regarding the Course Content and Format

We have chosen the content and the arrangement of materials and activities for specific reasons related to the current state of treatment in autism, the varying levels of experience of our students, and the wealth of expertise we have access to through our distinguished lecture series.

First and foremost, the world of autism intervention is complex and filled with controversy. Competent interventionists should be aware of the range of information (and misinformation) available, the degree of evidence supporting (or not supporting) various treatment options, and that even among advanced and knowledgeable professionals, there are differing vantage points and perspectives. Our desire was to create a course that would survey the landscape of information, evidence, and perspectives.

Second, students taking this on-line class will enter with a wide range of skills and experience and work in diverse settings. We hope to have chosen lectures and readings that have generality across those skills and settings. We also hope that the flexible response format will allow students to respond at their level of functioning and interest.

Finally, we have chosen this format with the understanding that any information covered in this class will be integrated and considered in the context of treatment settings where there is BCBA supervision. We have deliberately chosen not to include discussion threads or interactive exercises for two reasons. First, one course cannot teach the repertoire of general procedures and highly specific skills one needs to tailor intervention to specific children with autism. Supervised hands-on training and continuous learning from individuals with advanced behavior-analytic repertoires is required. Second, while role-playing and discussions help students explore concepts and increase understanding, they also allow opportunities for students to learn misinformation and/or incomplete or erroneous application of procedures. This can be especially dangerous for children with autism, for whom time and resources are precious. In applying what you learn in this course to individual cases, supervision or mentoring by a qualified behavior analyst is an ethical requirement. Although constant monitoring and comprehensive feedback are beyond the scope of this course, they are not beyond the scope of mentored experiences.

Required Textbook

No textbook is required for this course. Please see the end of the syllabus for additional instructional content.

Course Activities

Readings, Lectures, and Study Guides
Each module contains lectures, journal articles, and book chapters selected by the course instructor. There are also “student choice” readings in each module. All readings, instructor-selected and student choice, are listed at the end of this syllabus and can be found in the Course Menu. Each lecture and reading has a corresponding set of study guide questions. Each study guide consists mainly of multiple-choice questions. The questions are designed to facilitate and demonstrate comprehension of the content and are not tests. You can refer to the assigned readings and lectures when answering the questions.

Study Guide questions may have multiple correct answers. For each item, Canvas assigns points by dividing a point by the number of correct answers and then assigning partial credit for each correct answer chosen and subtracting partial credit for each incorrect answer. For instance, if a question has five possible answers, but only three are correct, each correct answer chosen is worth .33 points. If a student selects an incorrect answer, .33 points are deducted from the total earned. Using this example, if a student chooses two of the three correct answers and one of the incorrect answers, a total of .33 points would be awarded for this item. This reflects .66 points earned for selecting two of the three correct answers and -.33 for selecting one of the incorrect answers.
Canvas will record the highest score of your three attempts, with the exception of choice readings which allow two attempts.

**Lectures** – Lectures are given by noted professionals in autism treatment. These lectures address some portion of the content for the module and are meant to compliment the readings. You will watch each of the lectures and answer the study guide questions.

**Instructor-Selected Readings** - Each module contains a list of journal articles or book chapters selected by the course instructors. These are required readings. You will read each article and answer the study guide questions.

**Student Choice Readings** - Some modules contain a "choice" list of journal articles and book chapters. You will choose one reading from each designated choice list and answer the study guide questions for that reading. You can also choose to read additional readings from each grouping, if you like. If you complete more than one study guide, Canvas will record the highest of your attempts.

**Integration Assessments**
The integration assignments are designed to help the student pull together the information from each module into a meaningful applied context. Directions, a rubric, checklist, and template are provided for each integration essay. Review the integration assignment materials BEFORE you start the readings and lectures for each module. This will orient you to the expectations for each assignment and help you attend properly to the information in the lectures and readings.

Using the activity instructions, you will upload integration assignments to Turn It In for evaluation and credit. Grading will begin on the due date. Grades will be posted to the course page within two weeks after the due date. Grading will be based on the degree to which the student follows instructions, the accuracy of responses, supporting citations and references for responses, and the clarity of the answer. Students must work independently and use their own thoughts and words.

**Course Etiquette**
*Collaboration and civility are core values in the practice of behavior analysis.*

Completing courses is part of your graduate education. *How* you engage in those courses is also part of your graduate education – because of that, we emphasize professional etiquette as part of your preparation as a behavior analyst.

- Be kind, polite, and respectful. Sometimes the impersonality of the computer makes it hard to remember that we are all humans trying to teach, learn, and make the world a better place. That is why we went into behavior analysis. Be patient with yourself, the process and us!
- Be a problem solver and contributor to improvement of situations. Communicating online is not always as easy because of time differences, technology challenges, and lack of context. Try to approach problems from a behavior-analytic perspective and then work on solutions by changing the environment. For general “netiquette” rules, you can refer to sources such as this: [Core Rules of Netiquette](#)
- Seek help when you are not able to resolve something on your own. Collaboration is an important skill in behavior analysis. Learn to know what you don't know and when you need to ask for help. Respond to feedback and suggestions in a professional manner. Our courses are designed to help you succeed. That is why we exist.
- Remember the big picture and let that help you behave civilly when you feel discouraged. You are doing this because you will learn skills to help people. That is a goal worth all the hard effort you are putting into it.
Academic Integrity

Honesty is a core value in the practice of behavior analysis.

Progress depends on honesty in data collection, reporting and documenting. For that reason, plagiarism is especially troublesome for behavior analysts in training.

Please note that all work must be completed independently and must be your own work in your own words. Plagiarism, including submitting content identical or highly similar to other student’s papers and copying content from journal articles, websites or other sources is strictly prohibited. Using your own previous work without citation is also considered plagiarism.

TURN IT IN will systematically detect any plagiarism. If plagiarism is detected, you will not receive points for the activity. If more than one assignment is plagiarized, you will receive an “F” in the course. If you plagiarized in more than one course, you will be dropped from the program.

***** You are responsible for reading and understanding Academic Integrity Policy (found in the Preparatory Module of the course) and the UNT Student Academic Integrity Policy*****

Feedback

Feedback will be collected at the end of the semester. At that time, we will ask you to evaluate the content, instruction, and delivery of the course.

Course Calendar and Timelines

The Syllabus link on the Course Menu lists the dates when each assignment in the course is due. The Calendar in the Global Navigation Menu on Canvas will also show you all the assignments due on each day. Please use these resources to make a notation of all deadlines in your personal calendar.

- Please complete the first module of the course, Preparatory Activities – which includes the Student Attestation and the Syllabus quiz, during the first week of the semester. You must complete this module in order to unlock the rest of the modules in the course.
- THIS COURSE HAS WEEKLY DEADLINES. To help students do well on the Turn It In assignments and in the course, students are required to complete activities by weekly deadlines. We understand that circumstances may sometimes prevent you from meeting a deadline. Therefore, we have a one-week grace period after each deadline, with the exception of the Turn It In assignments. This means that each activity, except the Turn It In assignments, will be available for one week after the deadline on the calendar. After the one-week grace period ends, the activity will be deactivated and students will no longer be able earn any points on these activities. There will be no exceptions. Therefore, to do well, it is crucial to not only keep up with the course calendar, but to work ahead as much as possible in case of emergencies or other events.
- Students must submit all Turnitin assignments by the deadline. There are no grace periods for Turnitin assignments.
- Students must complete the entire course by the course deadline. Again, it is best to work ahead of schedule whenever possible in case of emergencies or other events that might make it difficult to meet a deadline.
  No incompletes will be given.
Tutoring
If you have questions about the course materials, please email us anytime. We love hearing from students and we are here to help! If you would like to know the answers to specific questions, please let us know the activity title, the item number, and provide some information about why you think certain answers are correct or incorrect. While we cannot provide specific correct answers, your information will help us to provide tutoring over the course content, which will then help you to determine the correct answers.

Course Grades
The grading system and feedback are designed to set you up for success if you complete the activities in order and as instructed. A grade of “B” or better is required in this course.

- No credit is given for late assignments.
- You will have immediate feedback on all on-line activities and will have feedback within two weeks on all Turn It In activities.
- Each activity indicates the number of points that can be earned within the activity.
- The Grades link on the left side of your screen will provide you with an up to date summary of points earned and the proportion and percentage conversions. Select “Calculate based only on graded assignments” if you would like to see the percentage of points that you have earned on assignments that you have already completed. Or, deselect this option to see the percentage of total course points that have been earned so far.
- Grades for the course are based on the percentage of possible points that a student earns: 92-100% = A, 85-91.9% = B, 77-84.9% = C, below 77% = F. Total points are what ultimately determine your grade.

Course Credit
Successful completion of this course earns the student 3 semester hours of graduate credit or 45 continuing education credits. A grade of “B” or better is required before proceeding to the next course and to fulfill the requirements for the UNT Certificate in Applied Behavior Analysis, the Graduate School, and BEHV Continuing Education requirements. At the end of the final week of the course, points will be tallied and each student will receive a course grade that is consistent with the number of points earned at that time. No incompletes will be given.

Course Design
Shahla Alai-Rosales, Ph.D., BCBA-D and Kenda Morrison, Ph.D., BCBA-D, designed this course. Additionally, Sigrid Glenn, Ph.D., designed several activities. Amanda Besner, B.A. assisted with assessment questions. Our outstanding staff conducts testing and reliability on course activities.

Permission to Use Copyrighted Materials
The journal articles and book chapters are used with permission of the publishers and may not be reproduced or utilized in any form or by any means, electronic or mechanical, without the written permission of the copyright owner. The lectures are used with permission of the presenters and may not be reproduced or utilized in any form or by any means, electronic or mechanical, without the written permission of the copyright owner.

All activities in the course are copyrighted by UNT Behavior Analysis Online, and may not be reproduced or utilized by any means, electronic or mechanical, without permission of the copyright owners.
Accommodations
The University of North Texas makes reasonable academic accommodation for students with disabilities. Students seeking reasonable accommodation must first register with the Office of Disability Accommodation (ODA) to verify their eligibility.

If a disability is verified, the ODA will provide you with a reasonable accommodation letter to be delivered to faculty to begin a private discussion regarding your specific needs in a course. You may request reasonable accommodations at any time, however, *ODA notices of reasonable accommodation should be provided as early as possible in the semester to avoid any delay in implementation. Note that students must obtain a new letter of reasonable accommodation for every semester and must meet with each faculty member prior to implementation in each class.*

Since this is an online program, you may email accommodations letters and requests to the course instructor. Instructors have the authority to ask students to discuss accommodations letters during an arranged appointment time to protect the privacy of the student. For additional information see the Office of Disability Accommodation website at [http://www.unt.edu/oda](http://www.unt.edu/oda). You may also contact them by phone at 940.565.4323.

Important Notice for F-1 Students Enrolled in a UNT Degree Program

The paragraph reads: (G) For F-1 students enrolled in classes for credit or classroom hours, no more than the equivalent of one class or three credits per session, term, semester, trimester, or quarter may be counted toward the full course of study requirement if the class is taken on-line or through distance education and does not require the student's physical attendance for classes, examination or other purposes integral to completion of the class. An on-line or distance education course is a course that is offered principally through the use of television, audio, or computer transmission including open broadcast, closed circuit, cable, microwave, or satellite, audio conferencing, or computer conferencing. If the F-1 student's course of study is in a language study program, no on-line or distance education classes may be considered to count toward a student's full course of study requirement.

**University of North Texas Compliance** To comply with immigration regulations, an F-1 visa holder within the United States may need to engage in an on-campus experiential component for this course. This component (which must be approved in advance by the instructor) can include activities such as taking an on-campus exam, participating in an on-campus lecture or lab activity, or other on-campus experience integral to the completion of this course.

If such an on-campus activity is required, it is the student’s responsibility to do the following:

1. Submit a written request to the instructor for an on-campus experiential component within one week of the start of the course.

2. Ensure that the activity on campus takes place and the instructor documents it in writing with a notice sent to the International Student and Scholar Services Office. ISSS has a form available that you may use for this purpose.

Because the decision may have serious immigration consequences, if an F-1 student is unsure about his or her need to participate in an on-campus experiential component for this course, s/he should contact the UNT International Student and Scholar Services Office (telephone 940-565-2195 or email internationaladvising@unt.edu) to get clarification before the one-week deadline.
